Behavior Aisle x BehaviorGPT

Every shopper step is a live call to Unbox AI BehaviorGPT, shown on a large console window.

Request, ranked reply and the shopper update appear side by side as the store runs.

Captured from the app on the visionOS simulator with real network calls, 8 Nov 2026.

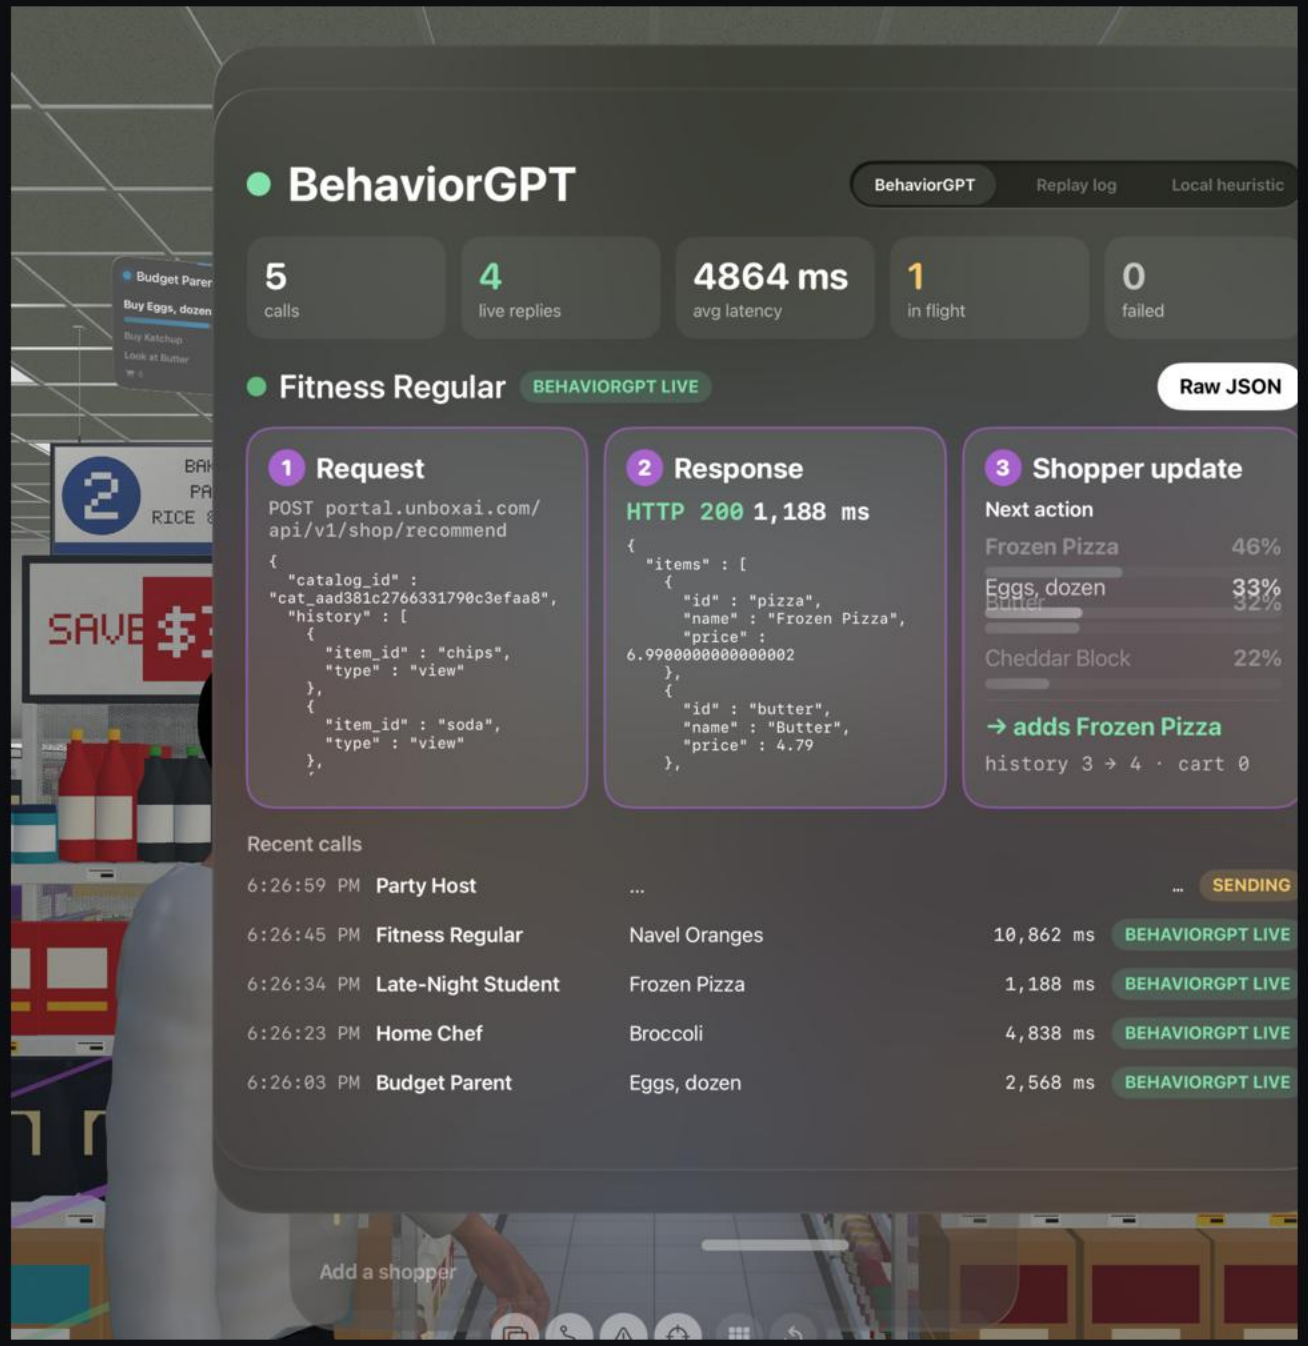

1. Live calls, one per shopper step

Party Host: history of 3 views sent to portal.unboxai.com/api/v1/shop/recommend.

HTTP 200 in 592 ms. BehaviorGPT ranks Cheddar Block, Frozen Pizza, Butter.

Shopper adds Cheddar Block; history 3 to 4. Six calls, five live replies, zero failures.

2. Raw JSON on demand

Raw JSON toggle shows the exact body sent (catalog_id, history events) and the reply items.

Judges can read the wire format; nothing is mocked between the model and the shopper.

What the console proves

Request card: endpoint and the history events actually sent.

Response card: HTTP status, network latency, BehaviorGPT rank order.

Shopper update card: probabilities, chosen action, history and cart counters after apply.

Source tag per call: BEHAVIORGPT LIVE, BEHAVIORGPT REPLAY or heuristic fallback.

Offline safety: 692 recorded BehaviorGPT replies bundled (tools/record_replay.mjs).
